6. Mark the FEMA Flood Zone the building is located in?
   a) [ ] B and X – Area of moderate flood hazard, usually the area between the limits of the 100-year and 500-year floods. B Zones are also used to designate base floodplains of lesser hazards, such as areas protected by levees from 100-year flood, or shallow flooding areas with average depths of less than one foot or drainage areas less than 1 square mile. Moderate to Low Risk Area

   b) [ ] C and X – Area of minimal flood hazard, usually depicted on FIRMs as above the 500-year flood level. Zone C may have ponding and local drainage problems that don’t warrant a detailed study or designation as base floodplain. Zone X is the area determined to be outside the 500-year flood and protected by levee from 100-year flood. Moderate to Low Risk Area

   c) [ ] A – Areas with a 1% annual chance of flooding and a 26% chance of flooding over the life of a 30-year mortgage. Because detailed analyses are not performed for such areas; no depths or base flood elevations are shown within these zones. High Risk Area

   d) [ ] AE – The base floodplain where base flood elevations are provided. AE Zones are now used on new format FIRMs instead of A1-A30 Zones. High Risk Area

   e) [ ] A1-30 – These are known as numbered A Zones (e.g., A7 or A14). This is the base floodplain where the FIRM shows a BFE (old format). High Risk Area

   f) [ ] AH – Areas with a 1% annual chance of shallow flooding, usually in the form of a pond, with an average depth ranging from 1 to 3 feet. These areas have a 26% chance of

   THIS IS NOT AN EMERGENCY PLAN
flood over the life of a 30-year mortgage. Base flood elevations derived from detailed analyses are shown at selected intervals within these zones. **High Risk Area**

g)  □ **AO** – River or stream flood hazard areas, and areas with a 1% or greater chance of shallow flooding each year, usually in the form of sheet flow, with an average depth ranging from 1 to 3 feet. These areas have a 26% chance of flooding over the life of a 30-year mortgage. Average flood depths derived from detailed analyses are shown within these zones. **High Risk Area**

h)  □ **AR** – Areas with a temporarily increased flood risk due to the building or restoration of a flood control system (such as a levee or a dam). Mandatory flood insurance purchase requirements will apply, but rates will not exceed the rates for unnumbered A zones if the structure is built or restored in compliance with Zone AR floodplain management regulations. **High Risk Area**

i)  □ **A99** – Areas with a 1% annual chance of flooding that will be protected by a Federal flood control system where construction has reached specified legal requirements. No depths or base flood elevations are shown within these zones. **High Risk Area**

j)  □ **V** – Coastal areas with a 1% or greater chance of flooding and an additional hazard associated with storm waves. These areas have a 26% chance of flooding over the life of a 30-year mortgage. No base flood elevations are shown within these zones. **High Risk – Coastal Areas**

k)  □ **VE, V1 – 30** – Coastal areas with a 1% or greater chance of flooding and an additional hazard associated with storm waves. These areas have a 26% chance of flooding over the life of a 30-year mortgage. Base flood elevations derived from detailed analyses are shown at selected intervals within these zones. **High Risk – Coastal Areas**

l)  □ **D** – Areas with possible but undetermined flood hazards. No flood hazard analysis has been conducted. Flood insurance rates are commensurate with the uncertainty of the flood risk. **Undetermined Risk Area**

7. What is the area’s Base Flood Elevation (BFE) if given in flood mapping?
   - See the A zones. Note: AE zones are now used on new format FIRMs instead of A1-A30 Zones. The BFE is a computed elevation to which floodwater is anticipated to rise. Base Flood Elevations (BFEs) are shown on Flood Insurance Rate Maps (FIRMs) and flood profiles.
