

State of Louisiana

Department of Health and Hospitals Office of Public Health

June 30, 2014

To all interested parties:

The attached list is a compilation of all Louisiana public water systems (PWS), which had violations of drinking water regulations in 2013. They are listed by parish and include the public water system identification (PWS ID), name of the supply, a description of the type of violation and the date of violation and are separated into community systems which serve homes and non-community systems which provide water to stores, schools, factories, rest areas, etc. A public water supply is one that serves 25 or more people or has 15 or more service connections for 60 or more days a year. There were 1406 regulated water systems during 2013, of which 1047 were community and 359 were non-community water systems. In 2013, 727 water systems (community [C] - 596 & non-community [N] - 131) had 2457 total violations (C-2098 & N-359). These violations fall into three major categories:

- a) Maximum Contaminant Level violation - Under the Safe Drinking Water Act (SDWA), the Environmental Protection Agency (EPA) sets national limits on contaminant levels in drinking water to ensure that the water is safe for human consumption. These limits are known as Maximum Contaminant Levels (MCLs).
- b) Treatment Technique violation - For some regulations, the EPA establishes treatment techniques in lieu of an MCL to control unacceptable levels of certain contaminants. For example, treatment techniques have been established for viruses, bacteria, turbidity and lead.
- c) Monitoring & Reporting violations - A PWS is required to monitor and verify that the levels of contaminants present in the water do not exceed the MCL on a regular schedule. If a sample is not collected and analyzed, a monitoring violation occurs. A reporting violation also includes failure to report test results correctly to the state or to notify water system customers of a violation in a timely or appropriate manner.

A separate table summarizing the 2013 violations in these three categories is included with this report; however this table only shows those federal violations considered "major" within the three categories, thus the violation counts may not agree with the list totals discussed in this report which includes all federal and state violations for 2013.

In 2013, four percent of the violations (C-88 & N-8) and 12% of the systems with violations (C-78 & N-8) were bacteriological MCL violations. Community and large non-community systems are required to be tested for coliform bacteria every month and small non-community systems are checked every three months. Although coliform bacteria are found throughout the environment and can enter water by various mechanisms, they are primarily associated with sewage and the intestinal tract of mammals and are used as an indicator of potential health related contamination of drinking water. If the presence of coliform is confirmed, the system is in violation and is required to notify its customers of the problem(s). These are listed in the report as "MCL (TCR), MONTHLY - COLIFORM (TCR)". If a special kind of coliform bacteria, which is more directly related to warm

blooded animals, is found the report indicates this as “MCL (TCR), ACUTE - COLIFORM (TCR)”. Since these acute violations are of much greater health concern, the manner and speed in which customers are notified is greatly enhanced. Louisiana had only three acute TCR violations (C-3 & N-0) with three systems in violation (C-3 & N-0). Excluding the acute violations, the notification of customers always comes after the violation occurred. The intent of the notice is to inform the customers of the potential health risk and to motivate the water systems to undertake actions that will prevent a reoccurrence of the problem.

In Louisiana the responsibility for collecting bacteriological samples lies with the individual water system. If the required number of samples is not collected, sampling violations occur and the system must notify their customers. Louisiana’s public water systems had initial (“ROUTINE”) and follow-up (“REPEAT”) bacteriological sampling violations in 2013. Initial refers to the first round of sampling and follow-up refers any subsequent confirmation sampling. The report lists 290 “MONITORING (TCR), ROUTINE MAJOR” violations (C-177 & N-113) with 142 systems in violation (C-81 & N-61), and 22 “MONITORING (TCR), REPEAT MAJOR” violations (C-20 & N-2) with 20 systems in violation (C-18 & N-2). Major refers to a failure to collect any samples. There were also a few minor bacteriological monitoring violations.

Additionally, public water systems that utilize groundwater as their source are required to monitor their source water (wells) for bacteriological contaminants if coliform bacteria are found during routine bacteriological sampling. Thirty-two water systems (C-34 & N-8) with a combined 45 violations (C-32 & N-13) failed to complete this monitoring.

Violations containing the terms “SWTR”, “TURBIDITY” or “IESWTR” are caused by public water systems that utilize surface water (lakes, rivers and streams) as their source that were not able to produce water with a low enough turbidity or did not monitor turbidity frequently enough. Turbidity is the measure of the amount of suspended material in the water. During the report year there were 62 regulated surface water systems in Louisiana, and 88 monitoring violations (C-87 & N-1) occurred with 5 systems in violation (C-4 & N-1), and 11 treatment technique violations (C-11 & N-0) occurred with one system in violation (C-1 & N-0). These violations normally occur in the winter and are associated with the increased difficulty of treating surface waters during colder months. This notification also comes after the violation.

In Louisiana, most of the chemical sampling (excluding lead & copper, disinfectants and disinfection-by-products) is done by Office of Public Health staff. Samples to check for numerous inorganic, organic and radiological compounds are routinely collected and analyzed. If levels of these are above a safe level, an MCL violation is issued or if samples are not collected in a timely manner, a monitoring violation is issued. There were 14 chemical MCL violations for arsenic (C-14 & N-0) with 4 systems in violation (C-4 & N-0). Arsenic is a metal found in some ground water.

Public water systems are required to maintain an adequate level of disinfectant in their water system and are issued violations if they fail to maintain a protective level. In 2013, there were 18 inadequate chlorine residual violations (C-5 & N-13) with 10 systems in violation (C-5 & N-5).

Public water systems are also required to test their water for disinfection-by-products and surface water systems are additionally required to test for disinfectant-by-product precursors. Total Trihalomethanes (TTHMs), Total Haloacetic Acids (HAA5) and Chlorite are all disinfection-by-products formed by disinfectants used to treat drinking water. Prior to 2004, only large systems were

required to monitor for TTHMs but now all community and non-transient non-community water systems are required to monitor TTHMs, HAA5 and Chlorite. The Stage 2 Disinfection By-Products Rule was implemented in full in 2013, which may have contributed to an increase in violation issued. Systems failed to monitor for the TTHMs (444 violations [C-407 & N-37] with 382 systems in violation [C-345 & N-37]), HAA5 (443 violations [C-407 & N-36] with 381 systems in violation [C-345 & N-36]), Chlorite (one violation [C-1 & N-0] with one system in violation [C-1 & N-0]) and disinfection-by-product precursors (2 violations [C-2 & N-0] with two systems in violation [C-2 & N-0]). There were also 133 violations (C-129 & N-4) of the MCL for TTHMs with 48 systems in violation (C-46 & N-2), and 36 violations (C-36 & N-0) of the MCL for HAA5 with 17 systems in violation (C-17 & N-0).

This report is an effort by the EPA and the Louisiana Office of Public Health to provide the general public with additional information regarding the quality of their drinking water. This report is a follow-up to earlier reports dating back to 1996. There was an increase in the number of violations due to ongoing efforts to implement disinfection-by-product monitoring for all disinfecting systems, as well as the transfer of responsibility, from OPH to individual water systems, for collecting bacteriological samples. A report on the violations for 2014 will be issued in the summer of 2015. Additionally, each water system produces an annual Consumer Confidence Reports which provides detailed information about chemical sampling results and drinking water violations. This and other drinking water information is available on EPA's internet site and on the Louisiana Safe Drinking Water Program internet site (see below).

If you have any additional questions, please feel free to call or write.
